

OVVAL  
COLLECTION

BY NAOTO FUKASAWA

Naoto Fukasawa,

“The ellipse curves of the ‘OVAL’ collection are creating a softer and warm feeling when you touch this squashed circle shape. Its elegant and beautiful form makes you feel kindness.”

Concept

An oval shape is a fundamental form, which is naturally linked to our human body. It is round and has a slightly elongated outline. This natural and simple shape connects human and the ambiance, the surroundings.

The collection items are designed to look simple. However, it is quite complicated and challenging to achieve and produce at such a high quality level. COTTO succeeded to perfectly accomplished that.

The highly polished material highlights the beauty of the collection items and reflects on our natural aesthetic senses of the body. The oval shape is an iconic typology which has been translated and applied on the entire collection. The Oval collection is the jewelry of the bathroom.

Contrary to the typical round shape design, the oval creates gentle, warmth and comfort curves. Fukasawa uses his minimalist sensibilities to determine the refined aesthetics and the Oval Collection usage. Each component features the distinctive form of the oval in its own particular way.

The oval contour of the toilet is carefully designed to balance the classic toilet shape, which is based on human proportions, and an engaging appearance. It has been designed to minimize the number of visible seams in its construction.

Naoto Fukasawa,

The polished chrome used throughout the collection underscores its beautifully sophisticated lines and smooth textures, offering a satisfying tactility and connection to the senses. The collection appears to be the jewelry of the bathroom, and its reflective sparkle accentuates this sensation.

“I believe ‘simple’ is what makes it the most obvious and recognizable — by eliminating excess. While ‘sophisticated’ expresses, for example, when a simple circle slightly squashed becoming an oval shape.”

The wash basin capitalizes on advanced fabrication technology to produce a seamlessly elegant ceramic shell. The shape of the basin provides a functional directionality to the bathroom counter space, optimizing its relationship to the human body.
